Galicia, naval and maritime leader

Asime

The Association of Metallurgical Industries of Galicia (ASIME), the metallurgy industry employer's association and, therefore the association of the shipping sector; a strategic activity for Galicia, is affiliated with shipbuilders and companies from the auxiliary and complementary naval sectors. Throughout our history, ASIME has become considered as one of the most representative naval business organizations at a national and international level.

Over 270 companies from the naval industry, clearly demonstrate their loyalty, and the support given to them by ASIME, as well as the great compromise acquired from this activity, which is strategic within our community as a nucleus for the generation of employment and wealth.

Located in the far northwest corner of the Iberian Peninsula, the privileged geographical situation of Galicia, with over 1,500 km of coastline, makes it the perfect enclave for locating the naval industry. We count on a naval industry, which is mainly located around the Vigo, Pontevedra and Ferrol estuaries, which offers a wide range of services for the building and repair of ships.

In these areas, the geographical characteristics of the Vigo estuary are highlighted with its natural deep-water trenches, and havens. In Ferrol, we find the public shipbuilding installations of Navantia. In all these areas, we find numerous private shipbuilders and a comprehensive auxiliary industry; forming a highly competitive and internationally renowned business network.

Galicia, naval and maritime leader

The Galician industry

This Galician industry is composed of more than a dozen shipbuilders / shipyards and 270 auxiliary or complementary companies, and constitutes one of the most important activities for the Galician economic structure.

It is, among other reasons, due to the strategic enclave and installations that throughout the years have developed advanced technology that the industry has been allowed to specialize in a range of ships with great added value. This has propelled the prestige and recognition of the sector, which has created an advantageous competitive position both nationally and internationally.

At present Traditionally, 50% of the shipbuilders in Spain are Galician. These form the private sector, and are mainly located on the estuaries of Vigo and Pontevedra.

On the Ferrol estuary are located the public shipyards of Navantia which that, together with the auxiliary and complementary industry of this area, provide a complete shipbuilding and ship repair services, especially focused on the military ships, but also on civil vessels, offshore structures, etc.

Galicia, naval and maritime leader

Shipbuilding and ship repair

The shipbuilding and shiprepair activity is one of the outstanding industries among those that form the industrial fabric of Galicia and Spain. It is highly specialised in building vessels with state-of-the-art technological innovation, such as oceanographic vessels, floating hotels, petroleum drilling-rig service boats, chemical tankers; multiservice, offshore, and seismic vessels; dredgers, tugs . . .

The auxiliary and complementary industry has experienced great growth in recent years, becoming the nucleus of the economic fabric and showing how it is a great source of innovation. We should also highlight the importance that shipbuilding and repair has recently earned as an emerging subsector in this industry for all types of leisure craft.

Within the auxiliary or complementary industry, Galicia can offer an integral solution, fulfilling any order no matter how specialised it may be with its companies dedicated to boiler making, industrial piping, electricity and electronics, marine accommodation, hydraulics and pneumatics, marine mechanics, machining, welding, processes and procedures, painting, surface coatings and treatment.

They are also very important the companies involved in propulsion systems, engineering, supply of marine communication equipment and navigational aids, design of custom integrated bridges . . .

Associated companies engaged shipbuilding & ship repair projects
